

Shape Tweening

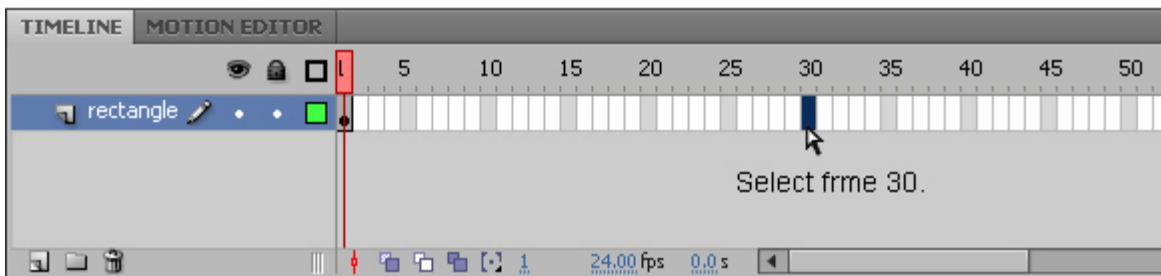

Step1

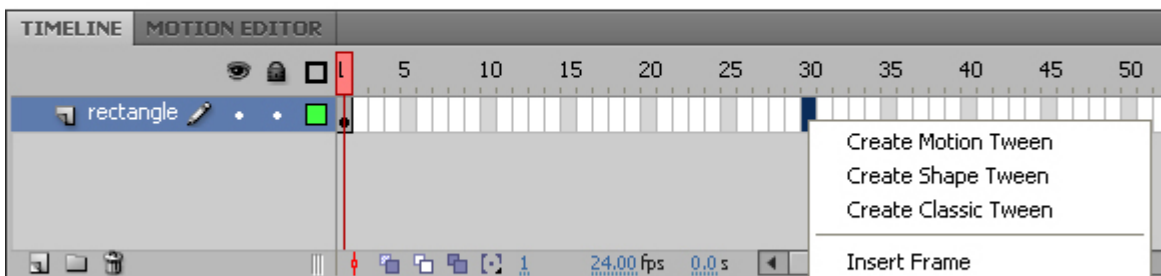

Draw the rectangle shape on the Stage.

Step2

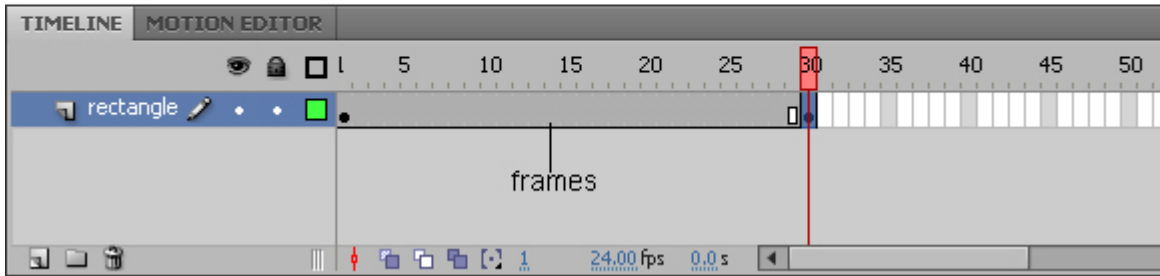

Step3

Right click frame 30. From the context menu choose Insert Keyframe or Insert Frame.

Another way to create control frame choose Insert > Timeline > Keyframe.

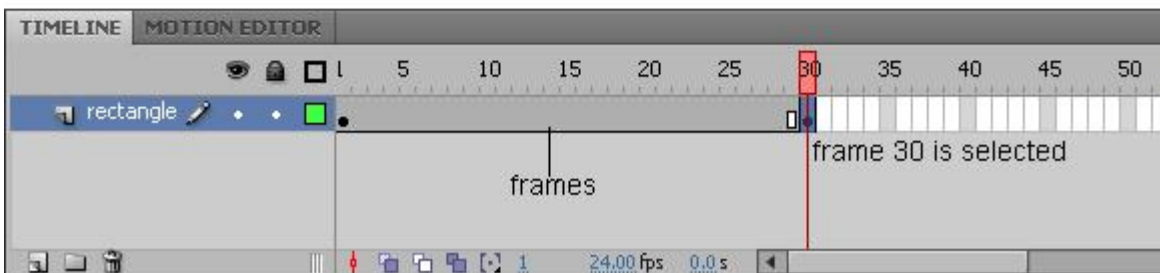

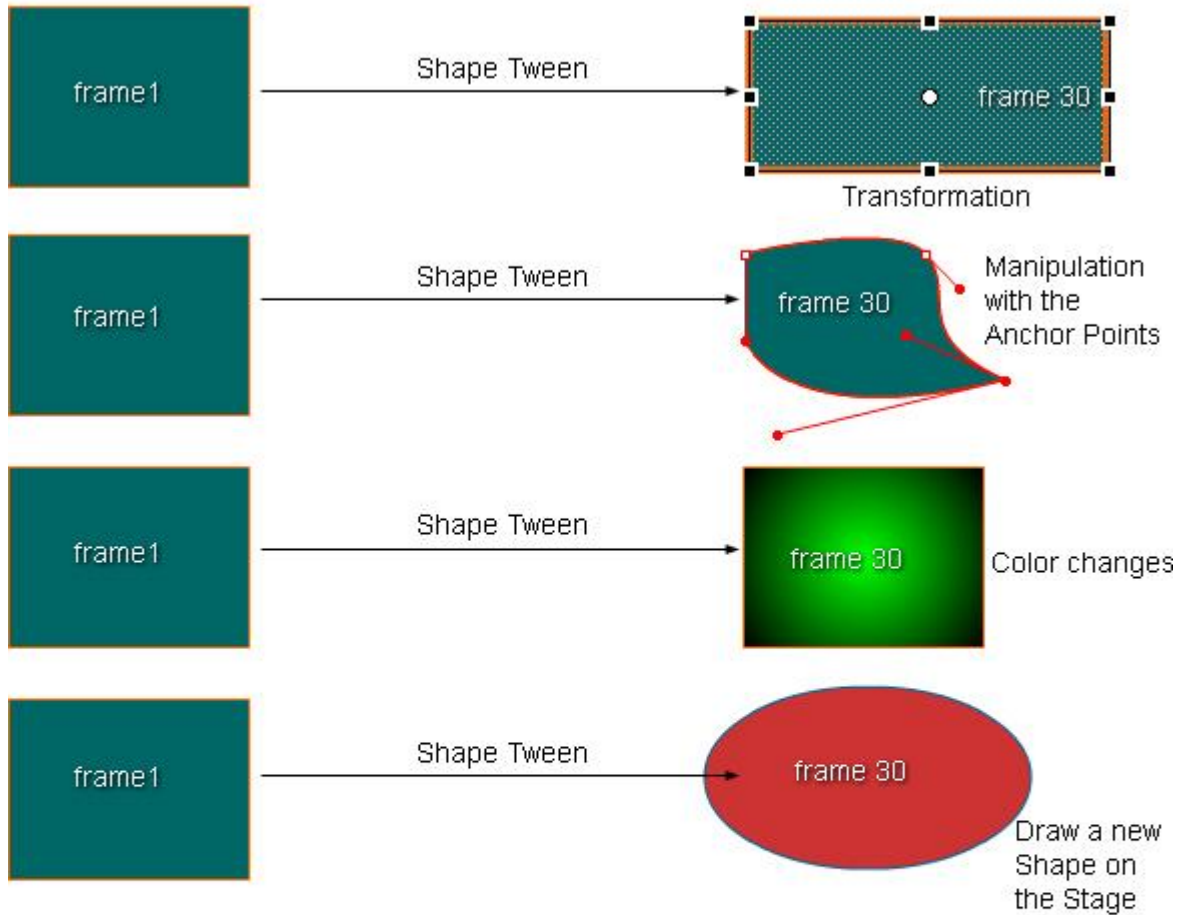

Step 4

Flash adds frames in the rectangle layer up to the selected point frame 30.

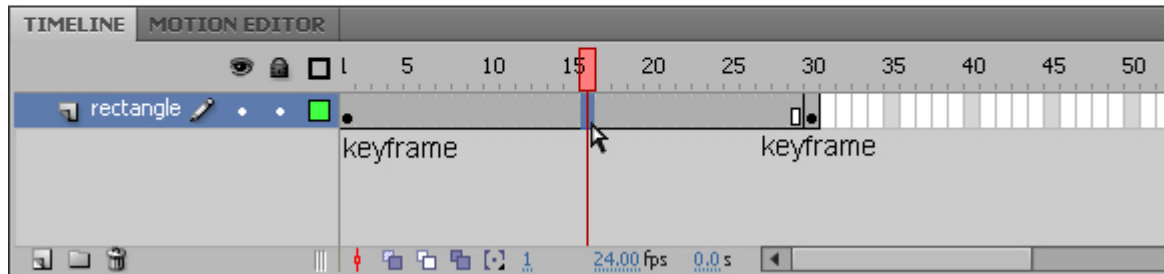

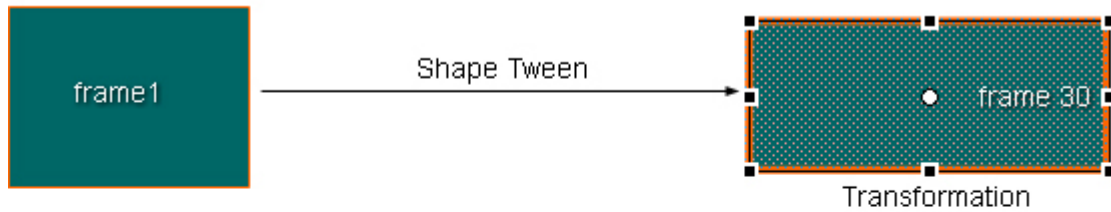

Step 5

Types of Shape Tweening

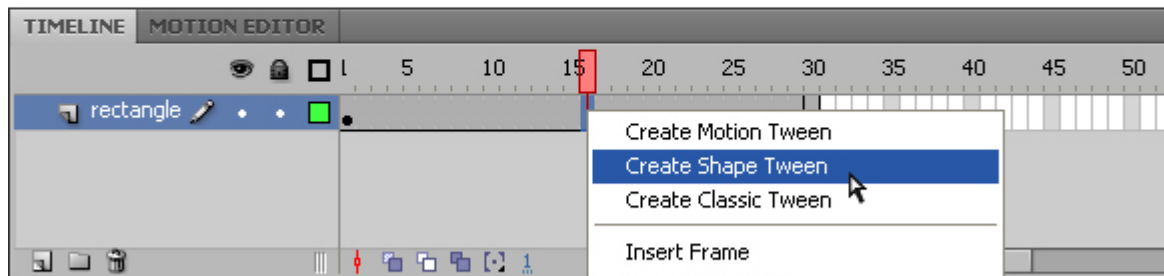

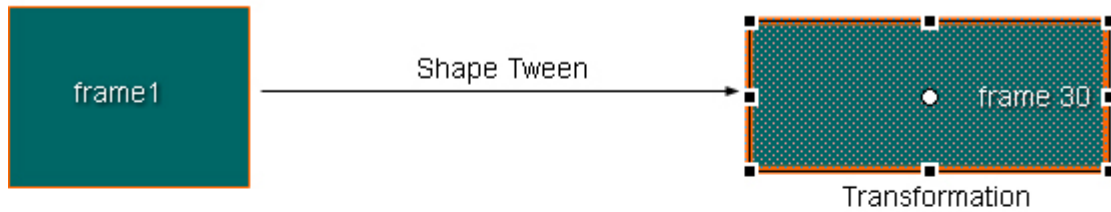

Make sure that frame 30 is selected in the Timeline.
On the Stage apply adjustments to the rectangle.

Step 6

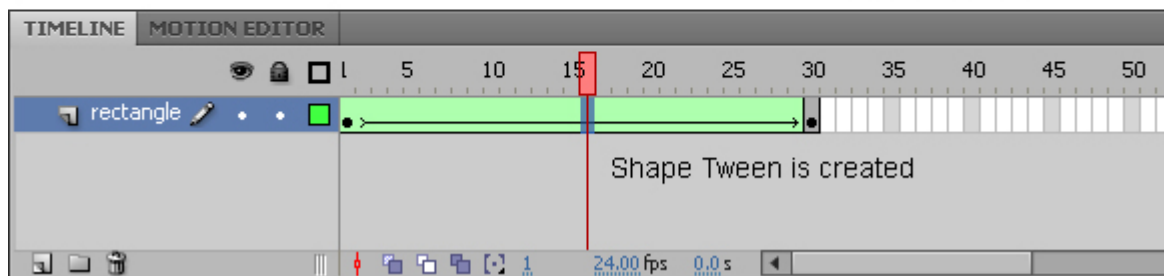

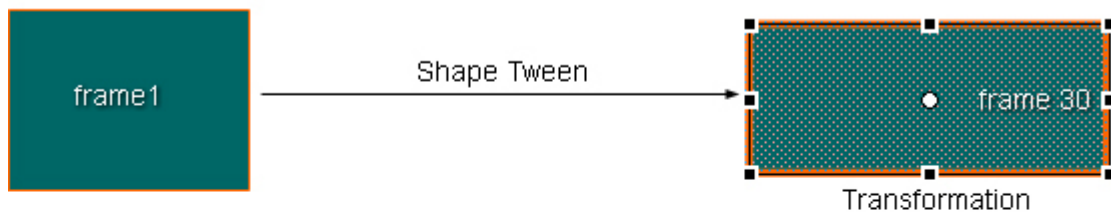

In the Timeline, select one of the frames in between the two keyframes.

Step 7

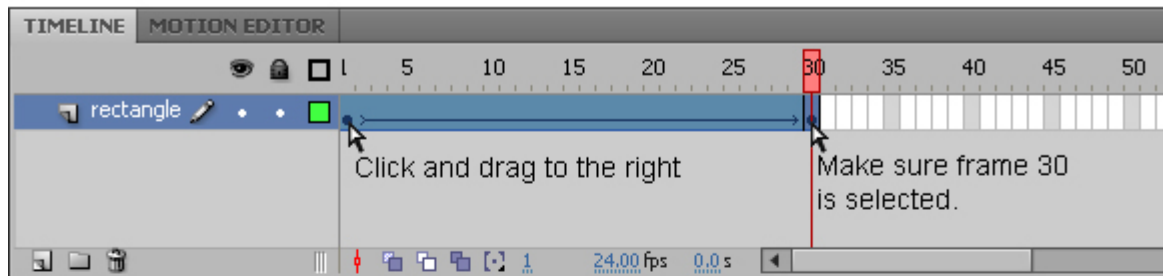

Right click selected frame.
From the context menu choose
Create Shape Tween.

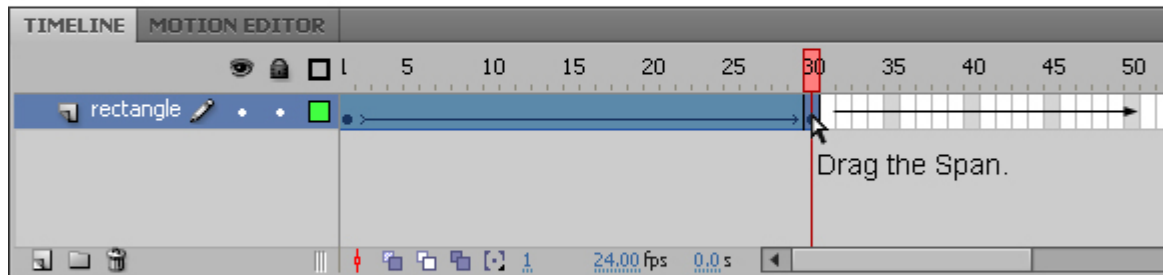

Step 8

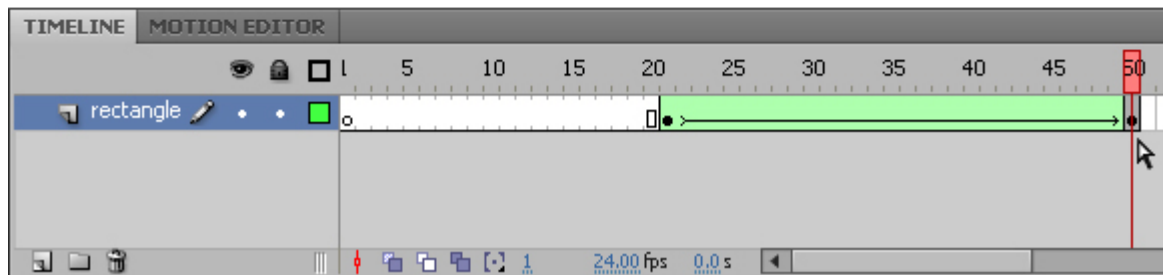

Step 9 (Move Tween Span to a new location)

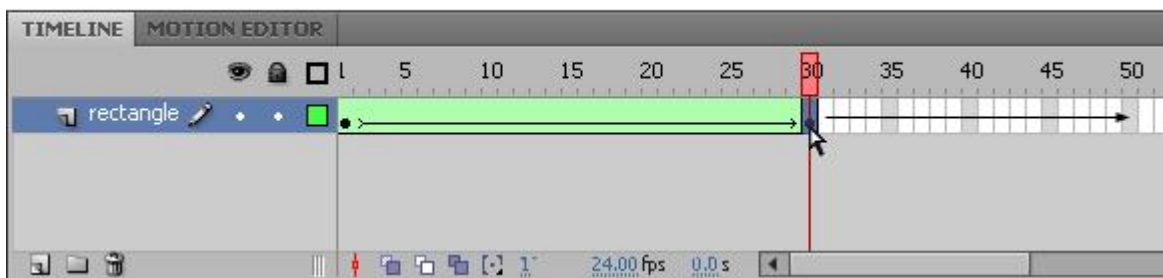

To select the entire Span, click frame1 and drag mouse cursor to the right while holding down. Make sure that keyframe 30 is selected.

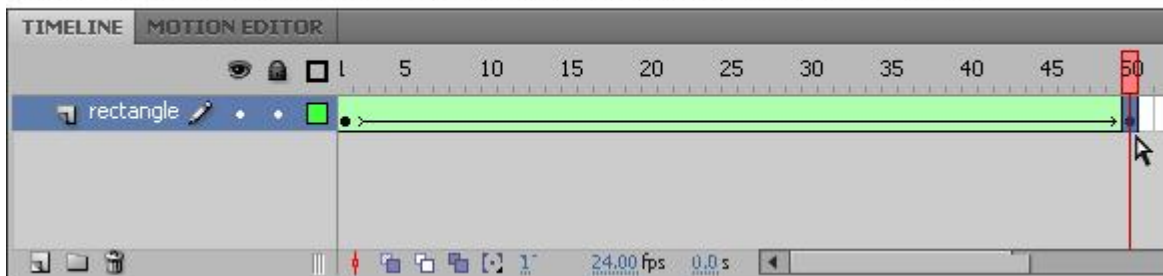

To move Span to a new location, drag the span.

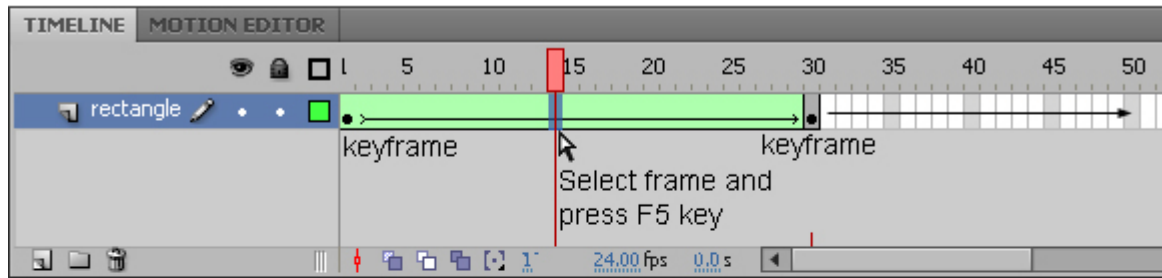

Step 10 (Edit the length of the Tween Span)

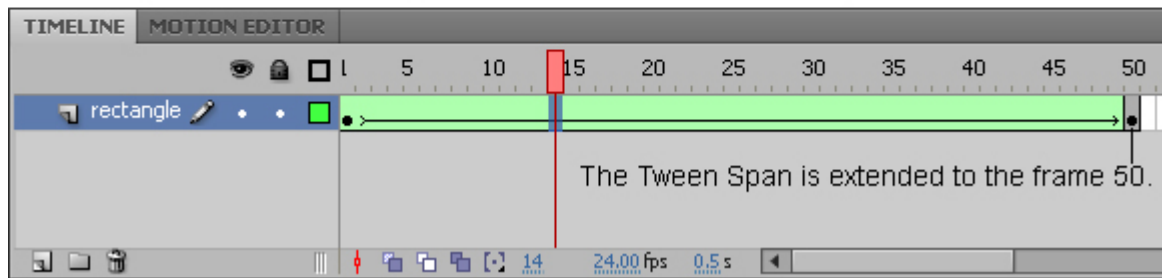

To change the length of an animation, drag the right edge of the Tween Span.

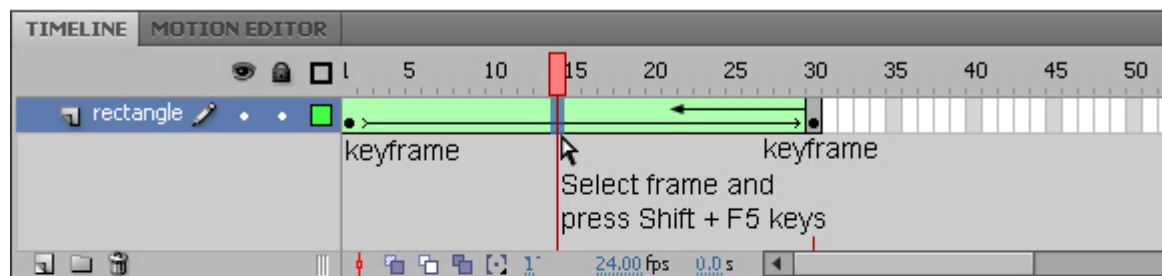

Step 10a (Edit the length of the Tween Span by pressing F5 Key)

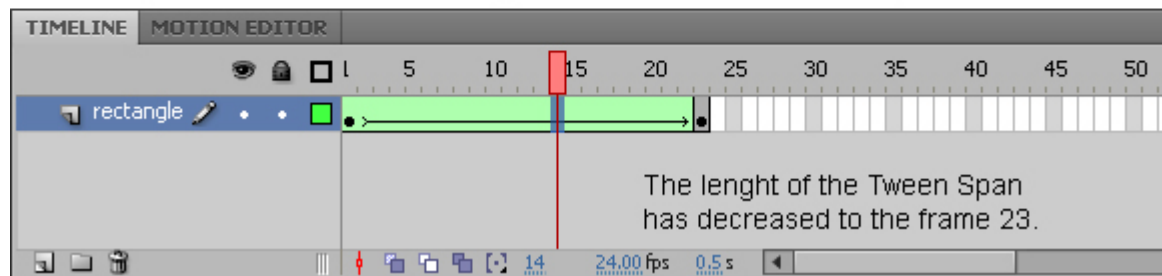

To change the length of an animation, in the Timeline select one of the frames in between the two keyframes. Press F5 key to add frames to the end of the Span.

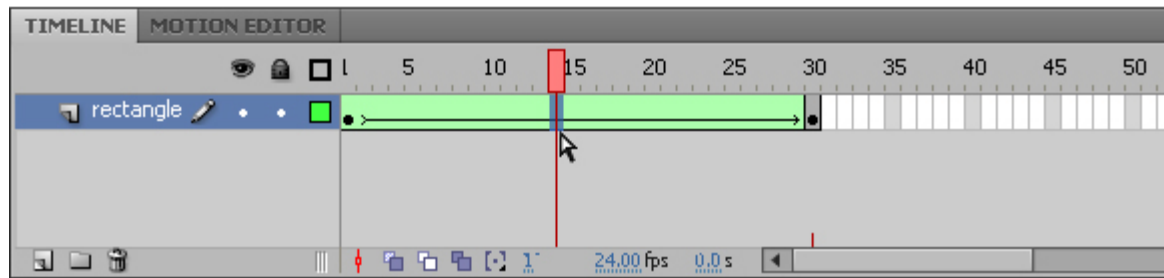

Step 10b (Edit the length of the Tween Span by pressing Shift + F5 Key)

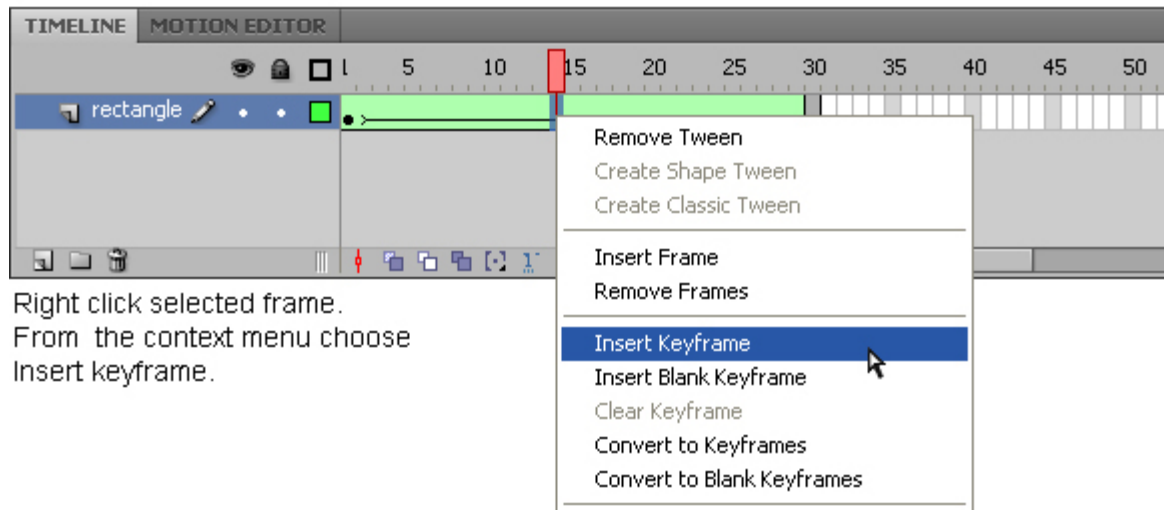

To remove frames from within a Span, in the Timeline select one of the frames in between the two keyframes. Press Shift + F5 keys to cut frames from within a span.

Step 11 (Add keyframe to the Tween Span)

To add a keyframe to the Span select frame where you want to add the keyframe.

Right click selected frame.
From the context menu choose
Insert keyframe.
